Satellite TV Installation Instructions

Before considering satellite televisions please read your lease agreement and ask the manager if satellite television is permissible at your location. At select communities, existing contracts exist between the owners and a cable provider granting exclusive access to that location.

Also consider the fact that cable is a month to month agreement whereas satellite service is a 1 and ½ year agreement that cannot be cancelled only moved.

After review of your lease and considering all your options any installation must comply with the instructions below:

Size:

The size of the dish must be of standard size approximately 18" in diameter.

Quantity:

Only 1 disk is allowed per apartment.

Location:

A disk may be installed on the patio only. Some balconies will not permit reception of satellite television.

Method:

There is to be one single hole drilled for allowing passage of the cable from satellite dish to television. This hole shall be roughly 12 inches from the floor. The wire should have a protective shield on both sides of the wall penetration. The satellite dish must be mounted on a pedestal or free standing structure.

Be sure installation is performed as indicated above. The installer may not be able to provide service within the limitations set forth above.

All damage to the apartment will be the responsibility of the resident. We will not sign any agreement presented to us by the cable company.
